

Algorithm1:

- Serves the requests based on the First come first serve.
- It generates a random number of requests to from and to destinations.
- Uses those requests to calculate the time.
- Here is the screenshot of the output

```
-----Generated Floor requests are-----
From    To
2----->9
2----->6
6----->9
8----->2
8----->10
9----->6
3----->7
2----->9
5----->7
5----->10
-----Algorithm 1 - FCFS - Queuebased -----
Time to travel from floor No:2 to floor:9 is = 21 Seconds
Time to travel from floor No:2 to floor:6 is = 33 Seconds
Time to travel from floor No:6 to floor:9 is = 42 Seconds
Time to travel from floor No:8 to floor:2 is = 60 Seconds
Time to travel from floor No:8 to floor:10 is = 66 Seconds
Time to travel from floor No:9 to floor:6 is = 75 Seconds
Time to travel from floor No:3 to floor:7 is = 87 Seconds
Time to travel from floor No:2 to floor:9 is = 108 Seconds
Time to travel from floor No:5 to floor:7 is = 114 Seconds
Time to travel from floor No:5 to floor:10 is = 129 Seconds
-----
Total Time to travel in seconds using Algorithm 1 is : 129
```

Algorithm2:

- In Algorithm 2, the requests are being served based on the more number of requests from particular floor.
- Therefore, it checks which floor has more requests and stores those destinations in an array and sends them to particular destination.
- Times are logged into time2 array.
- Here is the sceenshot.

```

-----Algorithm 2 - Check the floor with high number of requests -----
At floor 0 There are 0 requests
At floor 1 There are 0 requests
At floor 2 There are 3 requests
At floor 3 There are 1 requests
At floor 4 There are 0 requests
At floor 5 There are 2 requests
At floor 6 There are 1 requests
At floor 7 There are 0 requests
At floor 8 There are 2 requests
At floor 9 There are 1 requests

Floor which has more number of people is : 2
Index values are : 0 and the requested floor is: 9
Index values are : 1 and the requested floor is: 6
Index values are : 7 and the requested floor is: 9
Floor : 9 is served with time : 21 Seconds
Floor : 6 is served with time : 33 Seconds
Floor : 9 is served with time : 54 Seconds
*****
Time to travel from floor No:2 to floor:9 is = 75 Seconds
Time to travel from floor No:2 to floor:6 is = 87 Seconds
Time to travel from floor No:6 to floor:9 is = 96 Seconds
Time to travel from floor No:8 to floor:2 is = 114 Seconds
Time to travel from floor No:8 to floor:10 is = 120 Seconds
Time to travel from floor No:9 to floor:6 is = 129 Seconds
Time to travel from floor No:2 to floor:9 is = 150 Seconds
Time to travel from floor No:5 to floor:7 is = 156 Seconds
• Total time taken to serve the entire requests by using Algorithm 2 is : 156

```

Algorithm 3:

- This is the extension of the algorithm 2.
- Here, it sorts the destinations based on the distance to travel and serves them
- Rest of the algorithm is similar where the requests that are already served will be skipped and others will be served.
- The previous array values with index values are stored into the other array to make changes.
- Time is calculated and logged into time3 array
- Here is the screenshot of output.

```

-----Algorithm 3 - Find the smallest distance with respect to travel by sorting and -----
value for i = 0is :9and the index values before sorting are: 0
value for i = 1is :6and the index values before sorting are: 1
value for i = 2is :9and the index values before sorting are: 7
-----Sorting the elements-----
Sorted value for i = 0is :6
Sorted value for i = 1is :9
Sorted value for i = 2is :9
Floor : 9 is served with time : 12 Seconds
Floor : 6 is served with time : 33 Seconds
Floor : 9 is served with time : 54 Seconds
*****
Time to travel from floor No:2 to floor:9 is = 75 Seconds
Time to travel from floor No:2 to floor:6 is = 87 Seconds
Time to travel from floor No:6 to floor:9 is = 96 Seconds
Time to travel from floor No:8 to floor:2 is = 114 Seconds
Time to travel from floor No:8 to floor:10 is = 120 Seconds
Time to travel from floor No:9 to floor:6 is = 129 Seconds
Time to travel from floor No:5 to floor:7 is = 135 Seconds
• Total time taken to serve the entire requests by using Algorithm 2 is : 135

```
